# HearthGate™

## Model G70

Finally, there's a way to protect children from the dual hazards of heat and fire from barbecues, fireplaces, and wood burning stoves as well as the dangerous corners and hard, rough surfaces associated with hearths. The HearthGate™ is the solution for layouts that do not have mounting points straight across. The standard gate fits hearths 6' wide by 2' deep. Larger areas may require additional sections.

Five 24" interlocking sections adjust in 10" increments and can be angled or set in a straight line as needed. Included in the 5 piece basic set is a walk through gate section that opens in either direction with a simple one hand adult release.

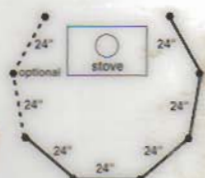

The HearthGate™ is 29 1/2" high and constructed of strong tubular steel with a black, non-toxic, heat resistant finish that is easy to maintain and blends with any decor.

Measuring is as easy as: 1. Simply determine the area to protect or isolate.  
2. Place objects at 24" intervals along the line of the intended gate configuration.  
3. Count the number of 24" segments to determine number of sections needed.

Patents Pending.
